App Store Connect API key

- 6 Push notifications
Your own Firebase or OneSignal

- 7 Add App Studio to your home screen
iPhone, iPad, Android and computers

- 8 Troubleshooting
Common messages and fixes

How to use this guide

Every step has a picture of what you should see. Orange outlines show exactly where to tap. The steps take about 20 minutes in total.

Your app is a **Website to App**: you pay once per platform and own the app, with a year of free compatibility updates.

WHAT YOU BOUGHT	WHAT YOU GET
Android (\$59.99 once)	Store-ready Android App Bundle (AAB) for Google Play and an APK, signed with your own upload key
iOS (\$99.99 once)	iPhone and iPad app, built on cloud Macs, signed in your Apple account and uploaded to TestFlight
Both (\$159.98 once)	Android and iOS

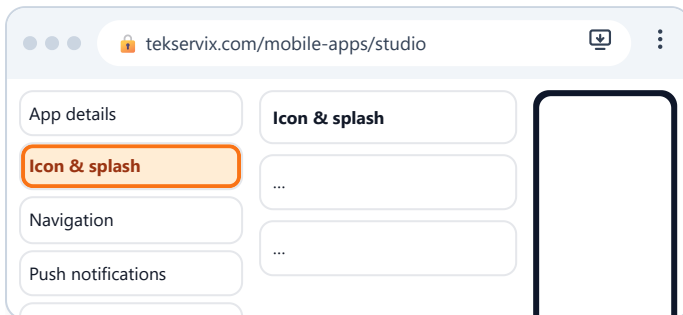

- ✓ **Website changes never need a new build** — the app shows your live site.
- ✓ After the free year, a new store build (when Google or Apple require one) is \$29, only when you need it.
- ✓ Need offline mode, Face ID or in-app purchases? Switch the app to **Native App** in Plan & billing.

2 Design your app in App Studio

Website to App setup guide - Tekservix

October 2026 · tekservix.com/install

Open **tekservix.com/mobile-apps/studio** and click your app. The workspace has the sections on the left, the editor in the middle and a live phone preview on the right. Changes save with **Save**; the status at the top shows *All changes saved*.

1

App details and branding

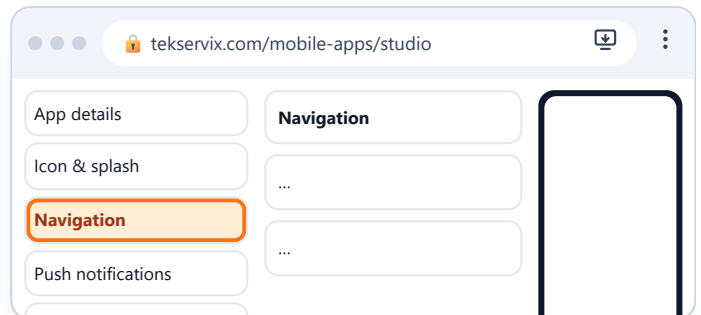

Set the name under the icon, the start page and the version. In **Icon & splash** upload a square icon (512 × 512 or larger) and choose the splash screen.

Links & web

Choose which domains stay inside the app and where other links open, plus pull-to-refresh, the offline screen and cookies for sign-in and payments.

Custom code

Hide website parts in the app (cookie banners, “download our app”) with CSS selectors, and add app-only CSS and JavaScript.

2

Navigation

Add a bottom tab bar (2–5 tabs), a side menu, an app bar and a floating button. Pick Material icons and the pages they open.

Native features

QR scanner, rate prompt, AdMob, analytics — switch on only what your site uses. Native-only features are marked.

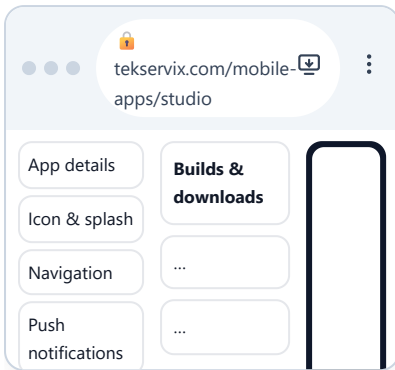

Device access

Camera, microphone and location — only switch on what your site needs; the stores ask why.

3 Try it on your phone

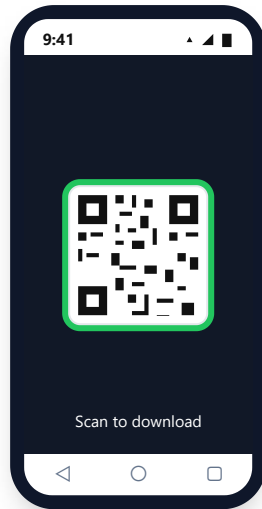

Website to App setup guide · Tekservix

October 2026 · tekservix.com/install

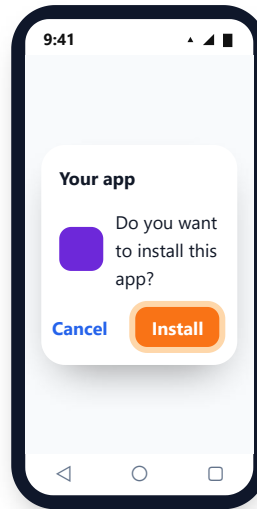

1 Build a test app

In **Builds & downloads** click **Test app (APK)**. It is ready in about 2–5 minutes.

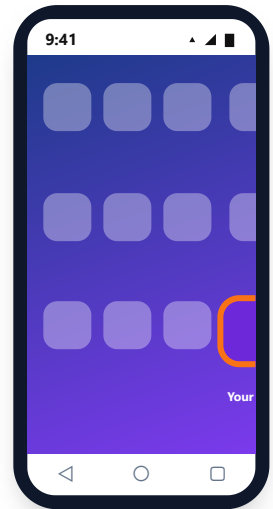

2 Scan the QR code

Click the QR button next to the APK and scan it with your Android phone's camera.

3 Allow and install

Open the download. If asked, allow **Install unknown apps** for your browser, then tap **Install**.

4 Open it

Your app opens with your splash screen, tabs and website.

Free trial: test apps show "Made with Tekservix" on the splash screen and stop opening when the 7-day trial ends. Store builds don't have either.

In **Builds & downloads** click **Android release (APK + AAB)**. Download the **AAB**.

Download your **signing key** and its password from the same page and keep them safe — you need the same key for every update.

In Google Play Console (one-time \$25 to Google) create the app, then upload the AAB to a testing track.

New personal developer accounts must run a **closed test with 12 testers for 14 days** before going live — our 12-tester service can do this for you.

Fill in the store listing (icon, screenshots, descriptions), the privacy policy URL and the Data safety form, then send for review.

For website links that open the app (App Links), publish the **assetlinks.json** shown in **Deep links & sharing**.

Prefer we do it? Order **Google Play publishing** or the **Store listing kit** in App Studio → Services.

iOS apps are built on cloud Macs and signed in **your** Apple Developer account (Apple Developer Program, \$99 a year to Apple). Connect an App Store Connect API key once:

App Store Connect → **Users and Access** → **Integrations** → create a Team key with the **App Manager** role and download the **.p8** file.

App Store Connect → **Apps** → create your app with the bundle ID shown in App Studio → **iOS & App Store**.

In App Studio → **iOS & App Store**, paste the Issuer ID and Key ID and upload the .p8 file.

In **Builds & downloads** click **Build iOS app**. It takes about 10–20 minutes and is uploaded to TestFlight automatically.

In TestFlight install it on your iPhone, then submit it for App Review from App Store Connect.

iOS has no free trial: builds need the iOS purchase. Apple reviews whether an app offers more than a website — use tabs, push notifications and at least one device feature.

Notifications are sent from **your own** Firebase or OneSignal account — you own the subscriber list. Tekserveix never sends notifications to your users.

Firebase (free)

1. Firebase console → create a project → add an Android app with your package name → download **google-services.json**.
2. App Studio → **Push notifications** → choose Firebase and upload the file.
3. For iPhone, upload your APNs key in Firebase → Project settings → Cloud Messaging.
4. Rebuild the app. Send campaigns from Firebase → Messaging.

OneSignal

1. Create a OneSignal app and connect Firebase (Android) and your APNs key (iPhone).
2. App Studio → **Push notifications** → choose OneSignal and paste the App ID.
3. Rebuild. Link users with `tekserveix.push.setUser(id)` and send from OneSignal.

Developer details (tokens, topics, server examples): tekserveix.com/mobile-apps/docs.

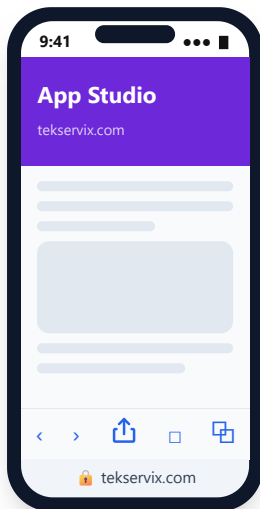

7 Add the App Studio dashboard to your home screen

Website to App setup guide - Tekservix

October 2020 - tekservix.com/install

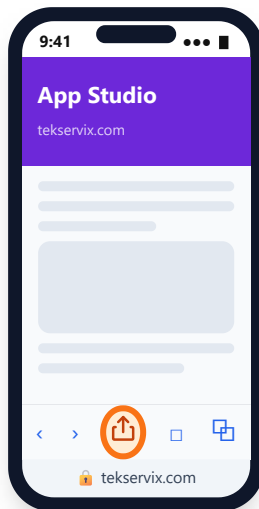

The App Studio dashboard is a web app: install it once and it opens full-screen from its own icon, like any app — no app store needed. Open **tekservix.com/mobile-apps/studio** on the device, sign in, then follow the steps for your device.

iPhone — Safari Recommended

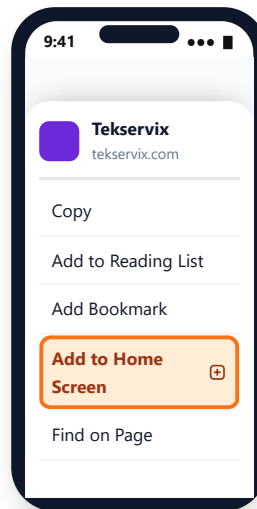

1 Open the dashboard in Safari

Open **tekservix.com/mobile-apps/studio** in **Safari** and sign in. (Links opened inside WhatsApp, Facebook or Instagram must be opened in Safari first.)

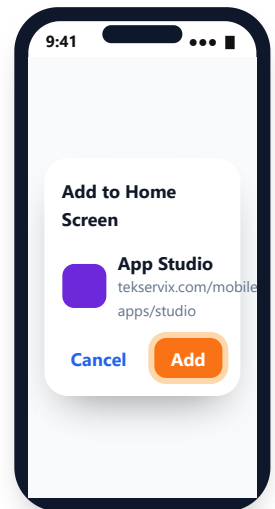

2 Tap the Share button

Tap **Share**  at the bottom of the screen. On iOS 18 and newer, tap **...** first if you don't see it.

3 Choose "Add to Home Screen"

Scroll down the list and tap **Add to Home Screen**.

4 Tap Add

Keep **Open as Web App** switched on (if shown) and tap **Add**. The App Studio icon appears on your home screen.

Chrome, Edge or Firefox on iPhone? On iOS 16.4 or newer: tap **Share** (Chrome: in the address bar; Edge and Firefox: in the  menu) → **Add to Home Screen** → **Add**. On older versions use Safari. Add to Home Screen isn't available in Private Browsing.

iPad — Safari

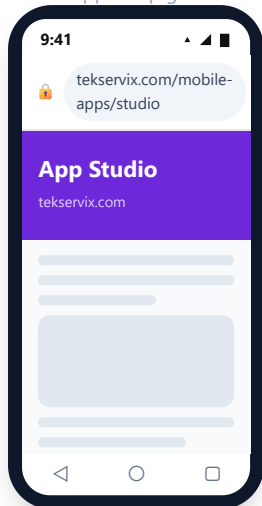

Same as iPhone, but the **Share** button  is at the **top right** of the screen, next to the address bar. Tap it → **Add to Home Screen** → **Add**.

Android — Chrome

Recommended

Website to App setup guide · Tekservix

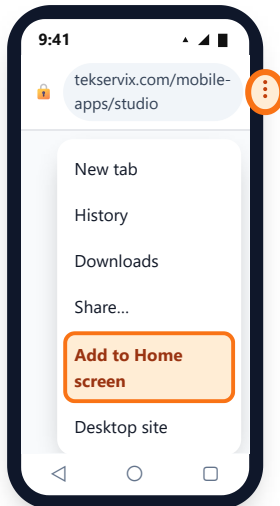

October 2026 · tekservix.com/install

1

Open the dashboard in Chrome

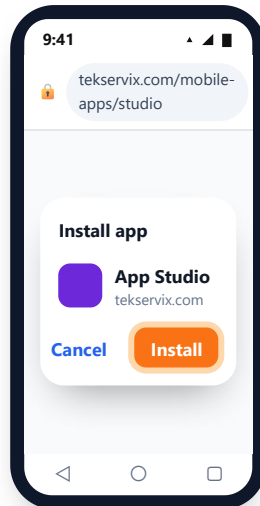

Open **tekservix.com/mobile-apps/studio** in **Chrome** and sign in. If Chrome shows an **Install app** banner, tap it and skip to step 3.

2

Open the : menu

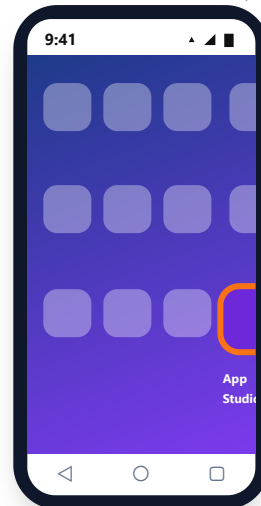

Tap the **:** menu at the top right, then **Add to Home screen** (or **Install app**).

3

Tap Install

Choose **Install** and confirm. The app appears on your home screen and in the app drawer.

4

Open it from your home screen

Tap the new **App Studio** icon. It opens full-screen and stays signed in.

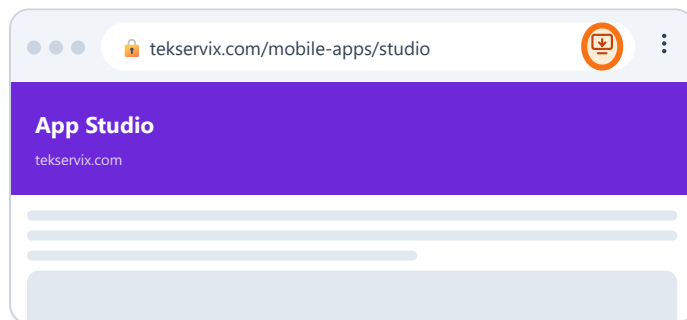

Samsung Internet (Galaxy phones)

Tap the install icon  in the address bar — or open the menu  → **Add page to** → **Home screen** → **Install**.

Firefox, Edge, Opera

Open the browser menu (**:** or **...**) → **Add app to Home screen** / **Install app** / **Add to phone** → confirm.

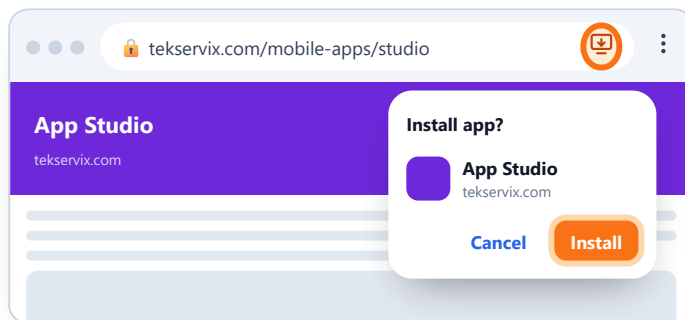

Computer — Chrome or Edge (Windows, Mac, Chromebook)

1

Click the install icon

Open **tekservix.com/mobile-apps/studio**. Click the install icon  at the right end of the address bar (Chrome: or **:** → **Cast, save and share** → **Install page as app**; Edge: **...** → **Apps** → **Install this site as an app**).

2

Click Install

Click **Install**. App Studio opens in its own window — pin it to the taskbar or Dock.

Mac with Safari (macOS Sonoma 14 or newer): File → **Add to Dock...** → **Add**. Desktop Firefox can't install web apps — use Chrome or Edge, or bookmark the page.

YOU SEE	WHAT TO DO
"Upload an app icon first"	App Studio → Icon & splash → upload a square PNG or JPG of at least 512 × 512.
Build refuses: "Firebase features need your google-services.json"	Upload it in Push notifications, or switch Firebase push, Analytics and Crashlytics off.
"This feature is part of ..."	The feature isn't in your plan. Switch it off or upgrade in Plan & billing.
iOS build asks for an Apple key	Add your App Store Connect API key in iOS & App Store (chapter 5).
Google sign-in doesn't work in the app	Add a link rule for accounts\google.com that opens in the in-app browser tab.
A page shows the offline screen	Check the phone's internet; the screen retries automatically.
